To get early access to Mercury 2, sign up here: https://inceptionlabs.ai/early-access

Getting Started

Welcome to the Inception Platform

Copy page

Inception Platform provides powerful AI capabilities through an OpenAI-compatible API interface. This means you can use existing OpenAI client libraries or direct REST calls to access our services.

Account Setup

1. Create an Inception Platform account or **sign in** directly if you already have one. Each new user is initially assigned **10 million free tokens** to help get started with the API.
2. Go to **API Keys** and create a new API key. You can start using the API immediately with your free tokens!
3. When your free tokens are running low, navigate to **Billing** to add your payment information for continued usage beyond the free tier.

Quick Start

Export your api key as an **environment variable** in your terminal.

macOS / Linux Windows

```
export INCEPTION_API_KEY="your_api_key_here"
```

```
    "model": "mercury-2",
    "messages": [
      {"role": "user", "content": "What is a diffusion model?"}
    ],
    "max_tokens": 1000
  }'
```

All API requests should be made to:

```
https://api.inceptionlabs.ai/v1
```

All API requests should be sent with the API key in the Authorization header:

```
Authorization: Bearer $INCEPTION_API_KEY
```

Using Third-Party Libraries

Inception API is also fully compatible with popular Python libraries:

```
    base_url="https://api.inceptionlabs.ai/v1"
)

response = client.chat.completions.create(
    model="mercury-2",
    messages=[{"role": "user", "content": "What is a diffusion model?"}],
    max_tokens=1000
)
print(response.choices[0].message.content)
```
